Jerry

Senior Frontend / Full-Stack / AI Agent Engineer

nicejerry666@gmail.com | Telegram: @make888money

8+ years in software development across JD.com, Alibaba, Meituan and fintech. Experienced in complex frontend systems, developer platforms and AI product delivery. Delivered products with 10M+ users and infrastructure used by 50+ teams. Recent work spans desktop Agents, model gateways and recoverable workflow prototypes.

EXPERIENCE

Meiyou Zhuozi AI | Mar 2026 - Sep 2026
AI Full-Stack Developer - desktop Agents, model gateway and delivery

Longbridge Securities | Nov 2025 - Mar 2026
Web Team - securities products and engineering delivery

Meituan | Mar 2022 - Jul 2025
L7; S performance rating - technical lead, dotted-line team coordination

Alibaba | Jul 2021 - Mar 2022
P7 - frontend engineering for local services

JD.com | Jun 2019 - Jul 2021
T5; A+ performance rating - project owner and NutUI core contributor

Quantex Technology | Dec 2017 - Jun 2019
Frontend Developer - web products and business applications

SELECTED ENGINEERING IMPACT

F1API - API Collaboration Platform | Meituan | Owner

• Adopted by **50+ deeply engaged teams**, each with >3 projects and >30 APIs. Reduced average per-API integration scheduling from about **3 hours to under 30 minutes**.

• Built AI-assisted mock, type and request-code generation, browser mocking and three-level RBAC; published **@yyfe/f1_mcp** to expose API context to Agents.

Shennong - Microfrontend Operations Platform | Meituan | Owner

• Integrated **500+ routes** for 100+ operations users with dynamic subapplication registration, 21 route-matching patterns and environment resource isolation.

• Implemented Babel lifecycle injection for React/Vue integration and a blank-screen detection SDK with iframe traversal.

JD.com H5 Games & NutUI | Project Owner / Core Contributor

• Delivered interactive H5 products with **10M+ users and 100M+ page views**. Combined Cocos Creator and Vue; atlas compression and lazy loading improved first-screen speed by **10x**.

• Core contributor to **NutUI** (6K+ GitHub stars); worked on Vue 3, Vite and TypeScript component tooling. Applied image compression, skeleton screens and PWA techniques in JD Plus.

EDUCATION & TECHNICAL CONTRIBUTIONS

Bachelor's degree, Civil Engineering | 2012 - 2016
City College of Science and Technology, Chongqing University (independent college; name at graduation).

Two published invention patent applications in web screenshots and a Cocos/Webpack/Vue hybrid framework. Technical talks on Webpack internals, Vue 3 and H5 games for 10M+ users.

The following five projects share the confirmed development period **Mar 2026 - Sep 2026**. Individual ownership and current project stages are listed below.

NiceAPI - AI Model Gateway | Independent customization, deployment & operation | Live

• Independently customized an open-source gateway and deployed and operated it. Serves **20+ daily active API users** and handles an average of **5 billion tokens per day**; usage is counted daily and resets each day.

• Implemented unified model access, routing, failover, API-key authorization, quotas, rate/concurrency limits, usage billing and an administration console. Stack: Go, Vue 3, TypeScript, PostgreSQL and Redis.

DeskClaw - Cross-Platform Desktop Agent | Led product & engineering | Maintenance discontinued

• Led product design and development from zero to one across Agent Gateway, plugins, tool calls, security approvals and Electron clients for macOS, Windows and Linux.

• Delivered streaming conversations, tool policies, audit/observability, scheduled tasks and Skills management; completed paid customer deployment, training and maintenance. Stack: Electron, TypeScript, Python.

Workflow OS - Recoverable AI Workflows | Independent development | Demo complete; not launched

• Built the **WorkflowIR - immutable ExecutionPlan - Temporal** pipeline with version publishing, pinned subworkflow dependencies, parallelism, loops, Agent steps and human approvals.

• Connected the React Studio canvas, node I/O, traces and run comparison. Migrated a 15-node review flow; validated locally end to end and in controlled staging shadow runs. Stack: React, Go, Temporal, PostgreSQL.

AI InkLoop - Whiteboard, E-Ink & Document Ink | Led development | Paused

• Led document rendering, handwriting, AI annotations, offline storage and synchronization. Used sidecar data to separate source documents from runtime state and shared protocols across Web, Obsidian and desktop hosts.

• Demonstrated phone camera/microphone capture to a Mac host, calibration, transcription and a read-only vector whiteboard. E-ink and cloud/device collaboration remained exploratory.

Browser Pilot - Agent Browser Infrastructure | Contributor | Frozen; iteration discontinued

• Contributed to browser infrastructure exposing isolated container sessions through **REST API, CLI and Web UI**, with Chrome/Cloak runtimes and live noVNC viewing.

• Project scope included device leases, command audit, execution-result contracts, session recovery and diagnostics, with a separate runtime worker. Stack: Python/FastAPI, Vue 3, Docker, PostgreSQL, S3.

SKILLS & ADDITIONAL PRACTICE

Frontend & full-stack: TypeScript, React, Vue, Next.js, Node.js, Python, FastAPI, Go, Electron.
Agent engineering: tool calls, MCP, Skills, RAG, model integration, execution audit, Temporal, Docker, PostgreSQL.

Additional practice: AI Setup with Go/Tauri, signature verification and resumable setup; JSON-driven A2UI and MCP document services; Smart Trader multi-Agent SaaS; local Qwen deployment, fine-tuning and evaluation.
